 SMT: Acronym for 'Simultaneous Multi-Threading'.  A processor technology that allows
      the simultaneous execution of multiple thread contexts within a single processor
      core. SMT is enabled by default.

```
System configured with libhugetlbfs library for application access to large pages
Environment variables set as follows:
     export HUGETLB_MORECORE=yes

Each process was bound to a cpu using submit= with the taskset command
    submit = taskset -p -c \$SPECUSERNUM \$\$ >/dev/null ; $command

This result was measured on an IBM System p5 510.   IBM System p5 505 and IBM System
p5 510 (2-core version) are electronically equivalent.
